**Primary objective:**
Monitor compliance combined with full observer coverage

**Electronic monitoring on small fixed gear vessels**

**Electronic monitoring for catch and discard information**
- EM provides catch and discard information.
- Vessels chose to have EM on their boats instead of observers.
- Trips are randomly selected for monitoring.
- Data collected from EM is used with observer data to estimate catch of the entire partial coverage fixed gear fleet.

**At-Sea scales** weigh all catch at-sea. Video monitoring evaluates scale tampering.

**Bin monitoring** ensures no pre-sorting prior to observer sampling.

**Salmon monitoring** ensures observers can sample salmon for prohibited species catch limits.

**Halibut deck sorting** ensures observers are present if deck sorting occurs so they can sample halibut for prohibited species catch limits.

**Observers on boat for all trips and deliveries**

**Video monitoring for compliance on catcher processor vessels**

- At least 1 observer on every trip

- At-Sea scales
- Bin monitoring
- Salmon monitoring
- Halibut deck sorting

**Primary objective:**
Catch estimation

- Catcher vessels participating out of total boats

- Catcher/Processor vessels 110-365 feet in length

- Fisheries: Amendment 80; GOA Rockfish Program; AFA pollock; BSAI Freezer longline Pacific cod
